

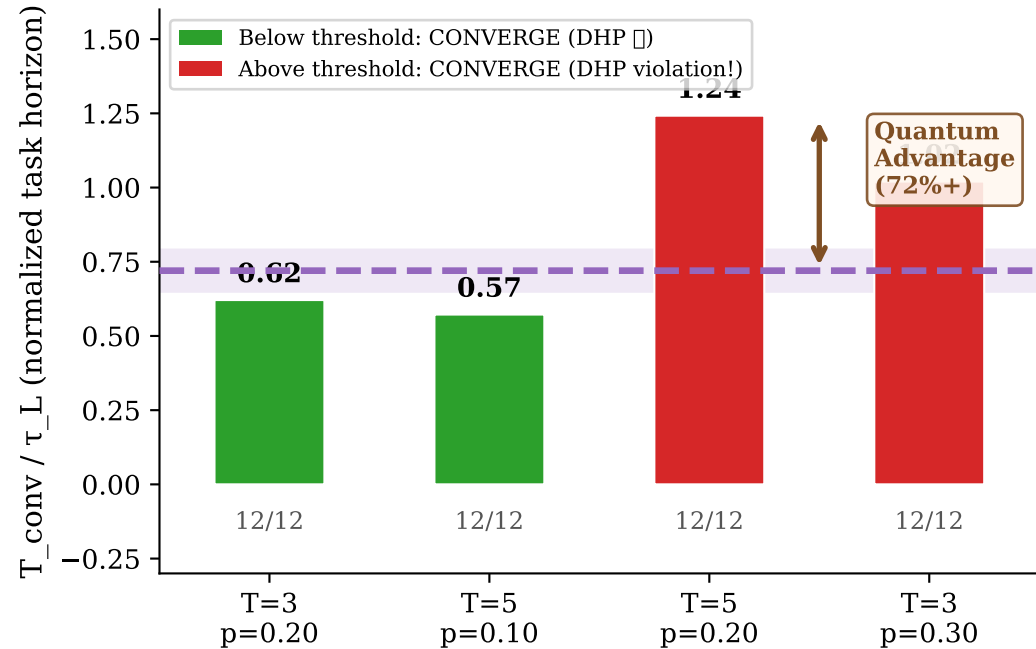

Figure 4: Quantum Parity Trap — ASYMPTOTIC IMMUNITY for Even T_{conv}
Both $T=3$ ($\rightarrow\infty$) and $T=5$ ($\geq 15\times$) defeat classical DHP for all $p < \text{channel capacity } p=0.75$

(a) Quantum vs Classical DHP Threshold
 Red bars: above DHP $\rightarrow$ should fail but DON'T

(b) Parity Trap Immune for ALL T_{conv}/τ_L Ratios
 ($T=3$: ratio up to 8.63; $T=5$: ratio up to 10.83)
