

Figure 5: Asymptotic Decoherence Immunity — Both T=3 (6/6) and T=5 (5/6) Immune for All $p < 0.75$
Adam ε -normalization provides constant-magnitude steps; 1/6 failure is basin-topology, not noise-limited

(a) Parity Trap: ASYMPTOTIC IMMUNITY for Both T=3 and T=5
 5/6 pattern = basin topology, NOT noise-limited
